SOFTWARE ENGINEER

OBJECTIVE

My objective is to be a top developer with highest level of expertise that will be globally recognized. My goal is to find myself in a space where I manage people or bring talent together to create all sorts of projects.

EXPERIENCE

BETWAY AFRICA (SUPERGROUP)

(Feb 2025-Current)

Backend developer for New York SE listed company where I add features to the casino gambling and gaming platform with occasional enhancements client facing and internally across Africa. Here is where I make the most use of caching, microservices, load testers and jobs. Integrate third party provider API's, make use of message que's for traffic and create releases at least once a week.

NSS FASTENERS

(July 2022-2024)

Worked at Africa's biggest stock listers of bolts and fasteners where 75 tons of steel are sold and exported daily and I helped optimize their database tables and warehouse operations to breakdown different segments of the business which incorporates replenishments at the correct times and boosting sales' efficiencies.

BROADSCOPE DIGITAL – FOUNDER & OWNER

(Feb 2025-Current)

Company I have registered and used to start my freelance journey. So far, I have handled 3 high budget projects which had their hurdles and 2 of them had to be paused due to funding but

Frontend:

React
Angular
StencilJs

overall the pilot run is a success with departments such as marketing about to be introduced.
